

## Marking Software

PHOTONmark4 is the result of continuous development of our marking software.

It offers a user-friendly, quickly understandable layout, with which all marking scenarios can be easily realized.

Users benefit from the following advantages and innovations:

Barcodes	Unicode support for suitable barcodes
Hatching	Faster hatching algorithm Hatch angle can be linked to the object outer contour
Extended possibilities to edit objects	Line by edit - line generator New vector editing options
Barcode-Jobloader	Load job via barcode scanner
Graphics import	Extensively revised with the support of new autoCAD versions
Extended laser parameters	Skywriting - precise mode for vector marking Defocus option
Revised parameter sets	Parameter sets include hatches Copy function for parameter sets
Improved operation	Extended hot-key functionality New controls
Text objects	Text scaling to defined field size
Toolbar	Revised and expanded
Performance	Increased performance due to parallelization
User management	Multi-level user management
New look-and-feel	Individual color settings

### PHOTONmark4 – Camera functions

- Shape detection (Option: SMART)
- Teaching Tool
- Automatic positioning of marking objects (Option: SMART)
- DMC Code verification (Option: SMART)
- Combined camera system possible (CamVisionCombi)
